Guidance for Use Case Template

Document each use case using the template shown in the Appendix. This section provides a description of each section in the use case template.

1. Use Case Identification

1.1. Use Case ID

Give each use case a unique numeric identifier, in hierarchical form: X.Y. Related use cases can be grouped in the hierarchy. Functional requirements can be traced back to a labeled use case.

1.2. Use Case Name

State a concise, results-oriented name for the use case. These reflect the tasks the user needs to be able to accomplish using the system. Include an action verb and a noun. Some examples:

- View part number information.
- Manually mark hypertext source and establish link to target.
- Place an order for a CD with the updated software version.

1.3. Use Case History

1.3.1. Created By

Supply the name of the person who initially documented this use case.

1.3.2. Date Created

Enter the date on which the use case was initially documented.

1.3.3. Last Updated By

Supply the name of the person who performed the most recent update to the use case description.

1.3.4. Date Last Updated

Enter the date on which the use case was most recently updated.

2. Use Case Definition

2.1. Actor

An actor is a person or other entity external to the software system being specified who interacts with the system and performs use cases to accomplish tasks. Different actors often correspond to different user classes, or roles, identified from the customer community that will use the product. Name the actor(s) that will be performing this use case.

2.2. Description

Provide a brief description of the reason for and outcome of this use case, or a high-level description of the sequence of actions and the outcome of executing the use case.

2.3. Preconditions

List any activities that must take place, or any conditions that must be true, before the use case can be started. Number each precondition. Examples:

1. User's identity has been authenticated.
2. User's computer has sufficient free memory available to launch task.

2.4. Postconditions

Describe the state of the system at the conclusion of the use case execution. Number each postcondition. Examples:

1. Document contains only valid SGML tags.
2. Price of item in database has been updated with new value.

2.5. Priority

Indicate the relative priority of implementing the functionality required to allow this use case to be executed. The priority scheme used must be the same as that used in the software requirements specification.

2.6. Frequency of Use

Estimate the number of times this use case will be performed by the actors per some appropriate unit of time.

2.7. Flow of Events

Provide a detailed description of the user actions and system responses that will take place during execution of the use case under normal, expected conditions. This dialog sequence will ultimately lead to accomplishing the goal stated in the use case name and description. This description may be written as an answer to the hypothetical question, "How do I <accomplish the task stated in the use case name>?" This is best done as a numbered list of actions performed by the actor, alternating with responses provided by the system.

2.8. Alternative Flows

Document other, legitimate usage scenarios that can take place within this use case separately in this section. State the alternative course, and describe any differences in the sequence of steps that take place. Number each alternative course using the Use Case ID as a prefix, followed by "AC" to indicate "Alternative Course". Example: X.Y.AC.1.

2.9. Exceptions

Describe any anticipated error conditions that could occur during execution of the use case, and define how the system is to respond to those conditions. Also, describe how the system is to respond if the use case execution fails for some unanticipated reason. Number each exception using the Use Case ID as a prefix, followed by "EX" to indicate "Exception". Example: X.Y.EX.1.

2.10. Includes

List any other use cases that are included ("called") by this use case. Common functionality that appears in multiple use cases can be split out into a separate use case that is included by the ones that need that common functionality.

2.11. Special Requirements

Identify any additional requirements, such as nonfunctional requirements, for the use case that may need to be addressed during design or implementation. These may include performance requirements or other quality attributes.

2.12. Assumptions

List any assumptions that were made in the analysis that led to accepting this use case into the product description and writing the use case description.

2.13. Notes and Issues

List any additional comments about this use case or any remaining open issues or TBDs (To Be Determineds) that must be resolved. Identify who will resolve each issue, the due date, and what the resolution ultimately is.

Use Case Template

Use Case ID:	UC.6		
Use Case Name:	Manage Account and View Dashboard		
Created By:	Gan Sui	Last Updated By:	Gan Sui
Date Created:	29/3/26	Date Last Updated:	6/4/26

Actor:	User
Description:	This use case allows users to log in and access a personalised dashboard. The dashboard displays the user's latest resume analysis summary, including only the overall resume score and the breakdown of Impact, Competencies, and Presentation, together with recommended courses, extracted skills, and favourite courses. The user is also able to add or remove favourite courses and navigate to resume-related functions.
Preconditions:	1. The user has registered an account.
Postconditions:	1. The user is authenticated. 2. The dashboard is displayed with personalised data. 3. The dashboard displays the latest resume analysis summary, recommended courses, extracted skills, and favourite courses.
Priority:	High
Frequency of Use:	High

Flow of Events:	1. The User navigates to the login page. 2. The system displays the login interface. 3. The User enters login credentials. 4. The system authenticates the User and starts the session. 5. The User accesses the dashboard. 6. The system displays the personalised dashboard with the latest resume analysis summary, recommended courses, extracted skills, and favourite courses. 7. The User views the latest resume score and the breakdown of Impact, Competencies, and Presentation. 8. The system displays the latest available resume analysis summary. 9. The User reviews the recommended courses and extracted skills shown on the dashboard. 10. The system displays course recommendations and extracted skills associated with the User's most recent resume data. 11. The User views, adds, or removes favourite courses. 12. The system updates the favourite courses list and refreshes the dashboard display. 13. The User may navigate to upload, edit, or analyse the resume. 14. The system directs the User to the selected resume-related function.
-----------------	---

Alternative Flows:	UC.6.AC.1: No resume analysis available 1. The system detects that the User has not uploaded or analysed a resume yet. 2. The system displays an empty resume analysis summary area. 3. The system prompts the User to upload and analyse a resume. UC.6.AC.2: No favourite courses available 1. The system detects that the User has not added any favourite courses. 2. The system displays an empty favourite courses section. 3. The system prompts the User to add courses to favourites.
Exceptions:	UC.6.EX.1: Invalid login credentials 1. The system rejects the login attempt. 2. The system displays an error message. 3. The system prompts the User to re-enter valid credentials.
Includes:	UC.4 – Upload and Edit Resume UC.5 – Analyse Resume
Special Requirements:	1. The system must store passwords securely using hashing. 2. The system must support both light and dark themes. 3. The dashboard must display personalised information relevant to the logged-in User only. 4. The dashboard must display only the latest resume analysis summary, consisting of the overall score and the breakdown of Impact, Competencies, and Presentation. 5. The dashboard must display recommended courses, extracted skills, and favourite courses.

Assumptions:	1. Favourite courses and resume analysis results are stored per User account. 2. Recommended courses are generated based on the User's resume analysis or profile data.
Notes and Issues:	None
